These Instructions May Have Changed, A New Version Can Be Found Here

3. Train SpamSieve with some examples of your spam and good messages, as described in the Do an Initial Training section. (This step is optional but highly recommended. You can skip it if you don't have any saved spam messages.)

4. SpamSieve will launch automatically when new mail arrives. It will examine each incoming message and move the spam messages to a separate mailbox. In order to keep SpamSieve's accuracy high, you'll need to tell it about any spam messages that you find in your inbox or good messages that you find in your spam mailbox. This is described in the Correct All Mistakes section.

You can return to this page at any time by going to SpamSieve's **Help** menu and choosing **Setting Up and Using SpamSieve**. The **Help** menu also contains a PDF version of this manual, which is easier to search and print.

The rest of this manual contains detailed information about how SpamSieve works and how it can be customized. If you have a question, it's probably answered here. However, following the above four steps is all most users will need to do to effectively use SpamSieve.

## 3.1   Setting Up Apple Mail

In addition to these written instructions, there is a video[35] that demonstrates how to set up and train SpamSieve with Apple Mail.

1. Quit Mail. Then double-click the SpamSieve application and choose **Install Apple Mail Plug-In** from the SpamSieve menu at the top-left of the screen. When you open Mail once more, you should see **SpamSieve - Change Settings**, **SpamSieve - Train as Good**, and **SpamSieve - Train as Spam** items in the **Message** menu:
